Please replace the paragraph beginning on page 12, line 20 with the following rewritten paragraph:

-- If operation 130 does not detect a polling from a content server, an operation 136 determines whether [[here]] there is a request from a local PC, i.e. one of the interactive karaoke entertainment systems 10. If not, process control is returned to operation 130. If there is a request from a local PC, an operation 138 determines whether the requested content is locally available. If not, the content is retrieved from the content server in an operation 140. It should be noted that the local PC server 116 can be connected to the content server mirror site 118 either on a continuous basis (such as with a ISDN line) or on an "on demand" basis, such as with dial-up modem access. Next, an operation 142 downloads the requested content to the requesting ~~local PC~~ local PC(s), and in operation 144 creates an accounting entry at the local PC server 116. This accounting entry, along with other data, is what is transferred to the content server in the operation 132. --
